

## Course Outline

**324-541 Electrochemical Analysis (3 credits, 3((3)-0-6))**

**Semester 2 Academic year 2021**

**Coordinator:** Asst. Prof. Dr. Apon Numnuam (Office room: Ch307/1)

**Lecturer:** Asst. Prof. Dr. Pipat Chooto, Assoc. Prof. Dr. Chong Kwok Feng,

Asst. Prof. Dr. Apon Numnuam and Dr. Itthipon Jeerapan

**Class:** Monday, Wednesday and Friday at 10.00 –11.00 am at Ch202 or arranged by instructors

**Course description:**

Principles and concepts in electrochemical analysis; applications of these techniques in polarography, coulometry, electrogravimetry, voltammetry, electrochemical impedance spectroscopy, recent applications of modern electrochemical techniques to environmental, clinical and food

**Learning objectives:**

1. To apply and integrate theory or reaction/interaction based on electrochemical techniques to environmental, clinical and food areas (PLO 1, 4)
2. To demonstrate and analyze data correctly based on electrochemical techniques to related area/work according to research methodology and quality assurance (PLO 2, 3, 8)
3. To be able to communicate and present correctly and precisely (PLO 5)
4. To demonstrate behaviors of morality and research ethics (PLO 7)

**Topic:**

| Week | Hour | Topic                                                                                                                                                                                                                                                    | Instructor                       | %    |
|------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|------|
| 1-4  | 10   | 1. Comprehensive theory<br>1.1 Introduction and Overview of Electrode Processes<br>1.2 Potentials and Thermodynamics of Cells<br>1.3 Kinetics of Electrode Reactions<br>1.4 Mass Transfer by Migration and Diffusion<br>1.5 Basic Potential Step Methods | Asst. Prof. Dr. Pipat Chooto     | 22.2 |
| 4-9  | 15   | 2. Electrochemical Sensor<br>2.1 Electrode material<br>2.2 Immobilization technique for recognition element                                                                                                                                              | Assoc. Prof. Dr. Chong Kwok Feng | 33.4 |

|       |    |                                                                                                                                                                                     |                              |      |
|-------|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|------|
|       |    | 2.3 Transduction mechanism<br>2.4 Contemporary electrochemical sensor – examples                                                                                                    |                              |      |
| 9-12  | 10 | 3. Electrochemical Speciation : Application of<br>3.1 Polarography<br>3.2 Stripping<br>3.3 Differential Pulse<br>3.4 Coulometry<br>3.5 Chronopotentiometry<br>3.6 Chronoamperometry | Asst. Prof. Dr. Apon Numnuam | 22.2 |
| 12-15 | 10 | 4. Recent advance in electrochemical research, wearable/implantable electrochemical biosensor and bioelectronics                                                                    | Dr. Itthipon Jeerapan        | 22.2 |

**Evaluation:**

Assignments, presentation, examination including active learning: 33% (1<sup>st</sup>-6<sup>th</sup> week), 33% (7<sup>th</sup>-10<sup>th</sup> week), 34% (11<sup>th</sup>-15<sup>th</sup> week)
