

TAMING WICKED PROBLEMS

*Grappling with MESSY problems at work,
in relationships, and in our lives,
that CANNOT be solved yet MUST be confronted.*

Joseph Bently, PhD

A Practical Guide to Innovations:
Using Design Research to Address
"Wicked Problems" in Medical Education

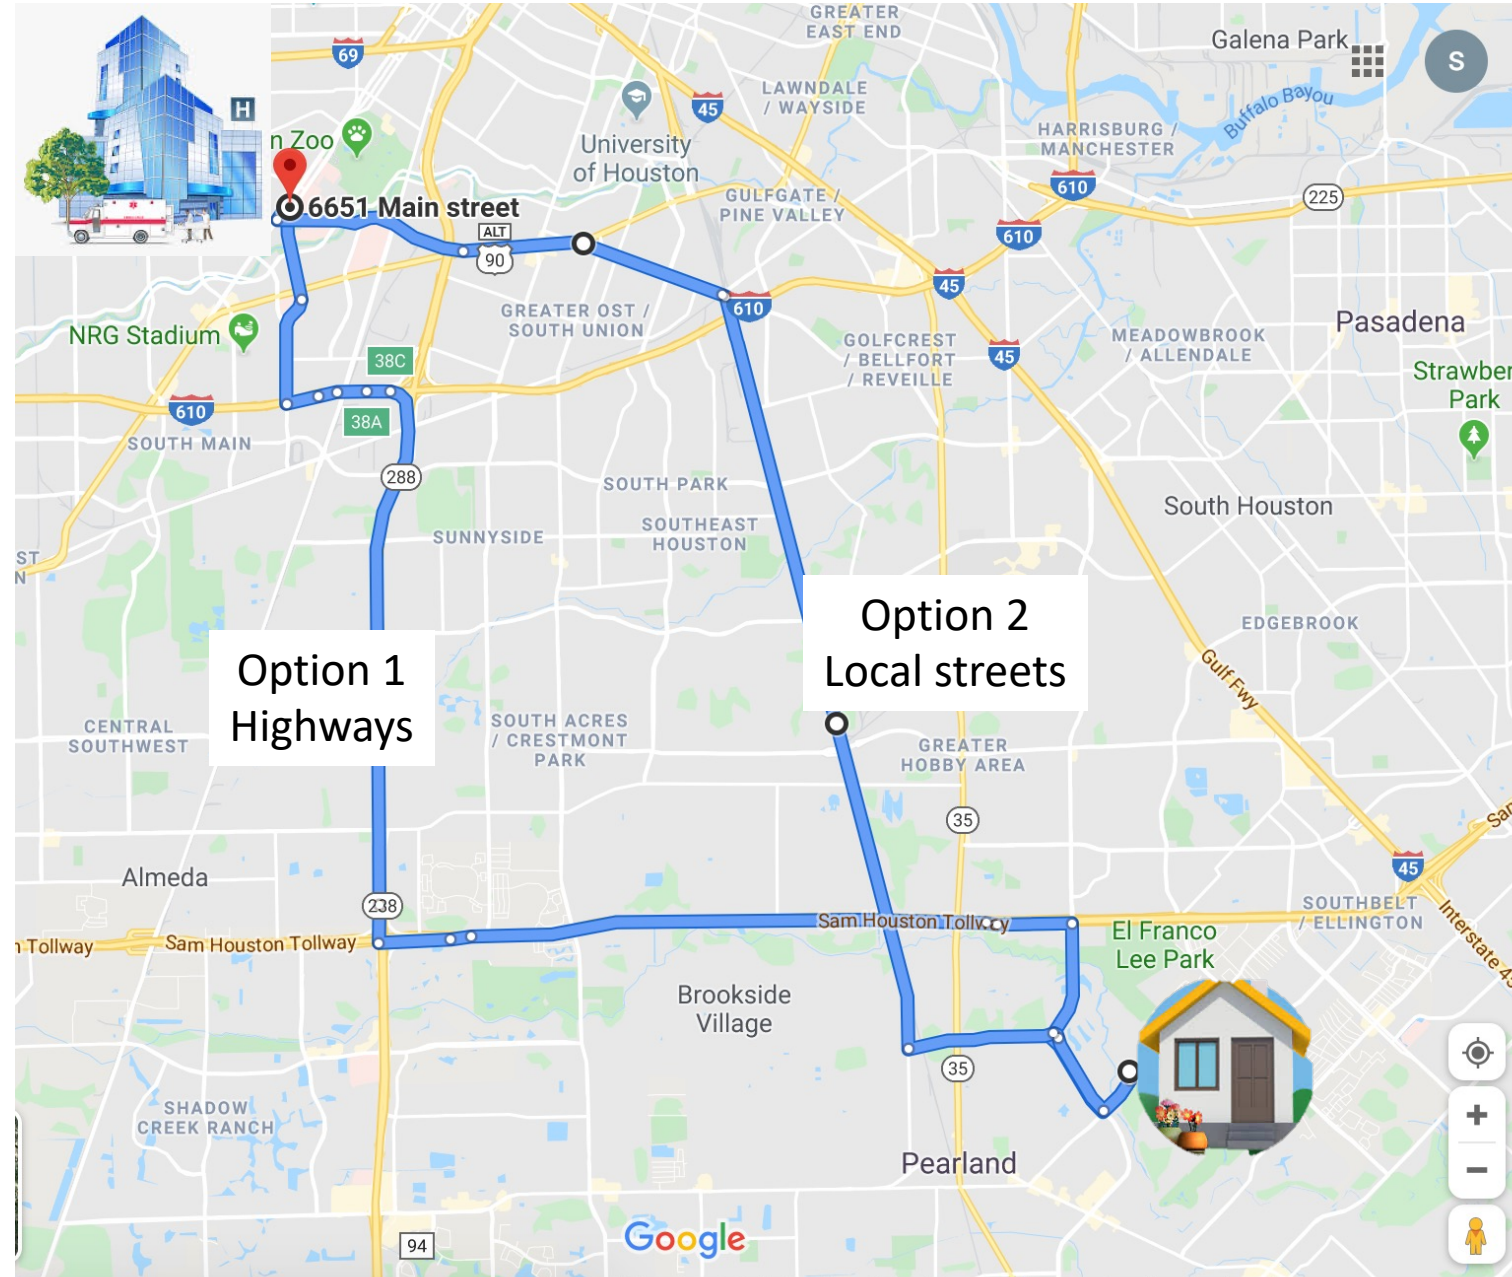

Satid Thammasitboon, MD, MHPE
Audrea Burns, PhD

Center for Research, Innovation and
Scholarship in Medical Education

A photograph of a grand theater interior. The stage is covered by large, heavy red curtains. Several ornate, starburst-style chandeliers hang from the ceiling. The audience seating is arranged in multiple tiers, with the upper levels featuring curved, balcony-like structures. The walls are covered in a textured, gold-colored material. The overall atmosphere is one of classic elegance and grandeur.

Prelude...

Which Route Should I Take?

- You are a research team
- Design a study to solve my problem

Research Question

Study Design

Outcome Measures

Option 2

Option 1

Workshop Objectives

Discuss “wicked problems” as an analytical framework to address challenges within the complex medical education environment

Analyze the use of educational design research as a pragmatic approach to developing educational innovations

Discriminate program/product evaluation vs. research

PART ONE THE COMPLEX WORLD

A Total Disruption

Life, Work, Politics and Beyond

Wicked Problems

A. Send a rocket to the moon

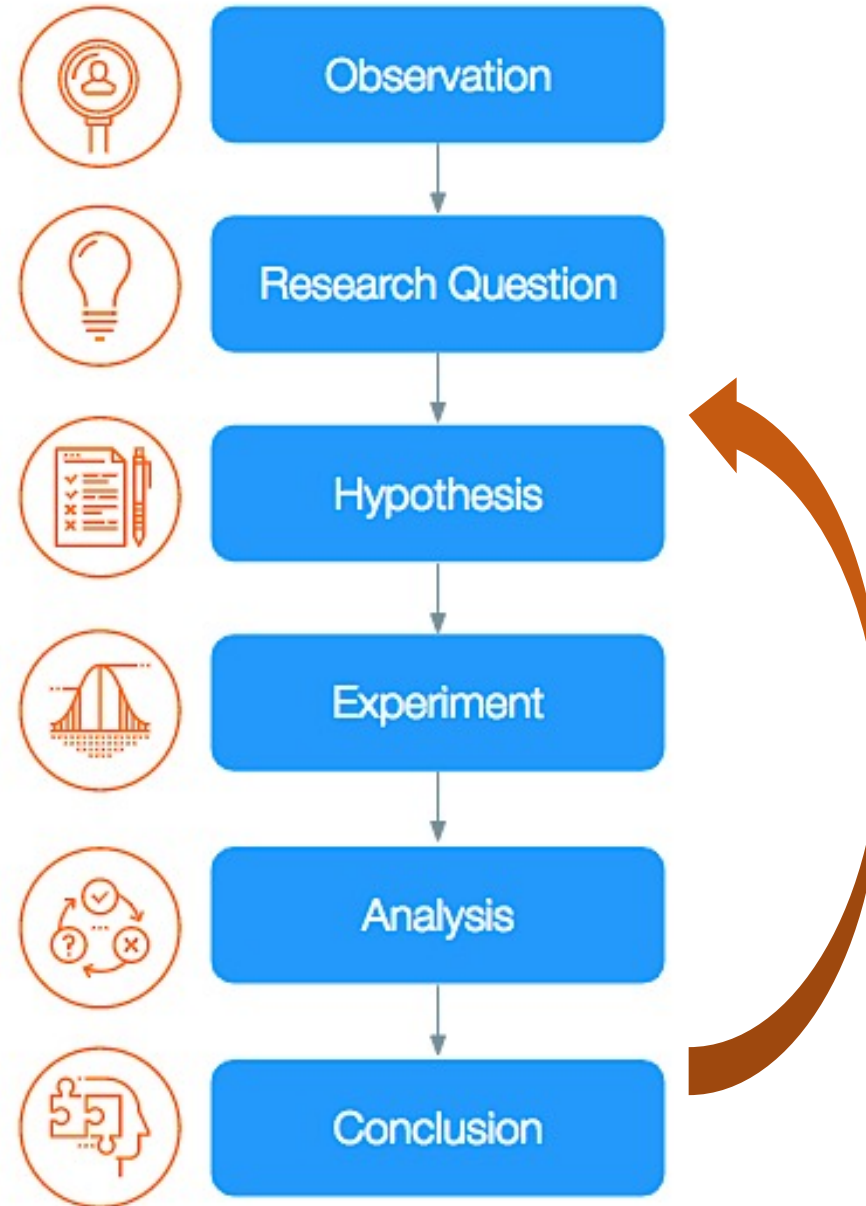

B. Raise a child

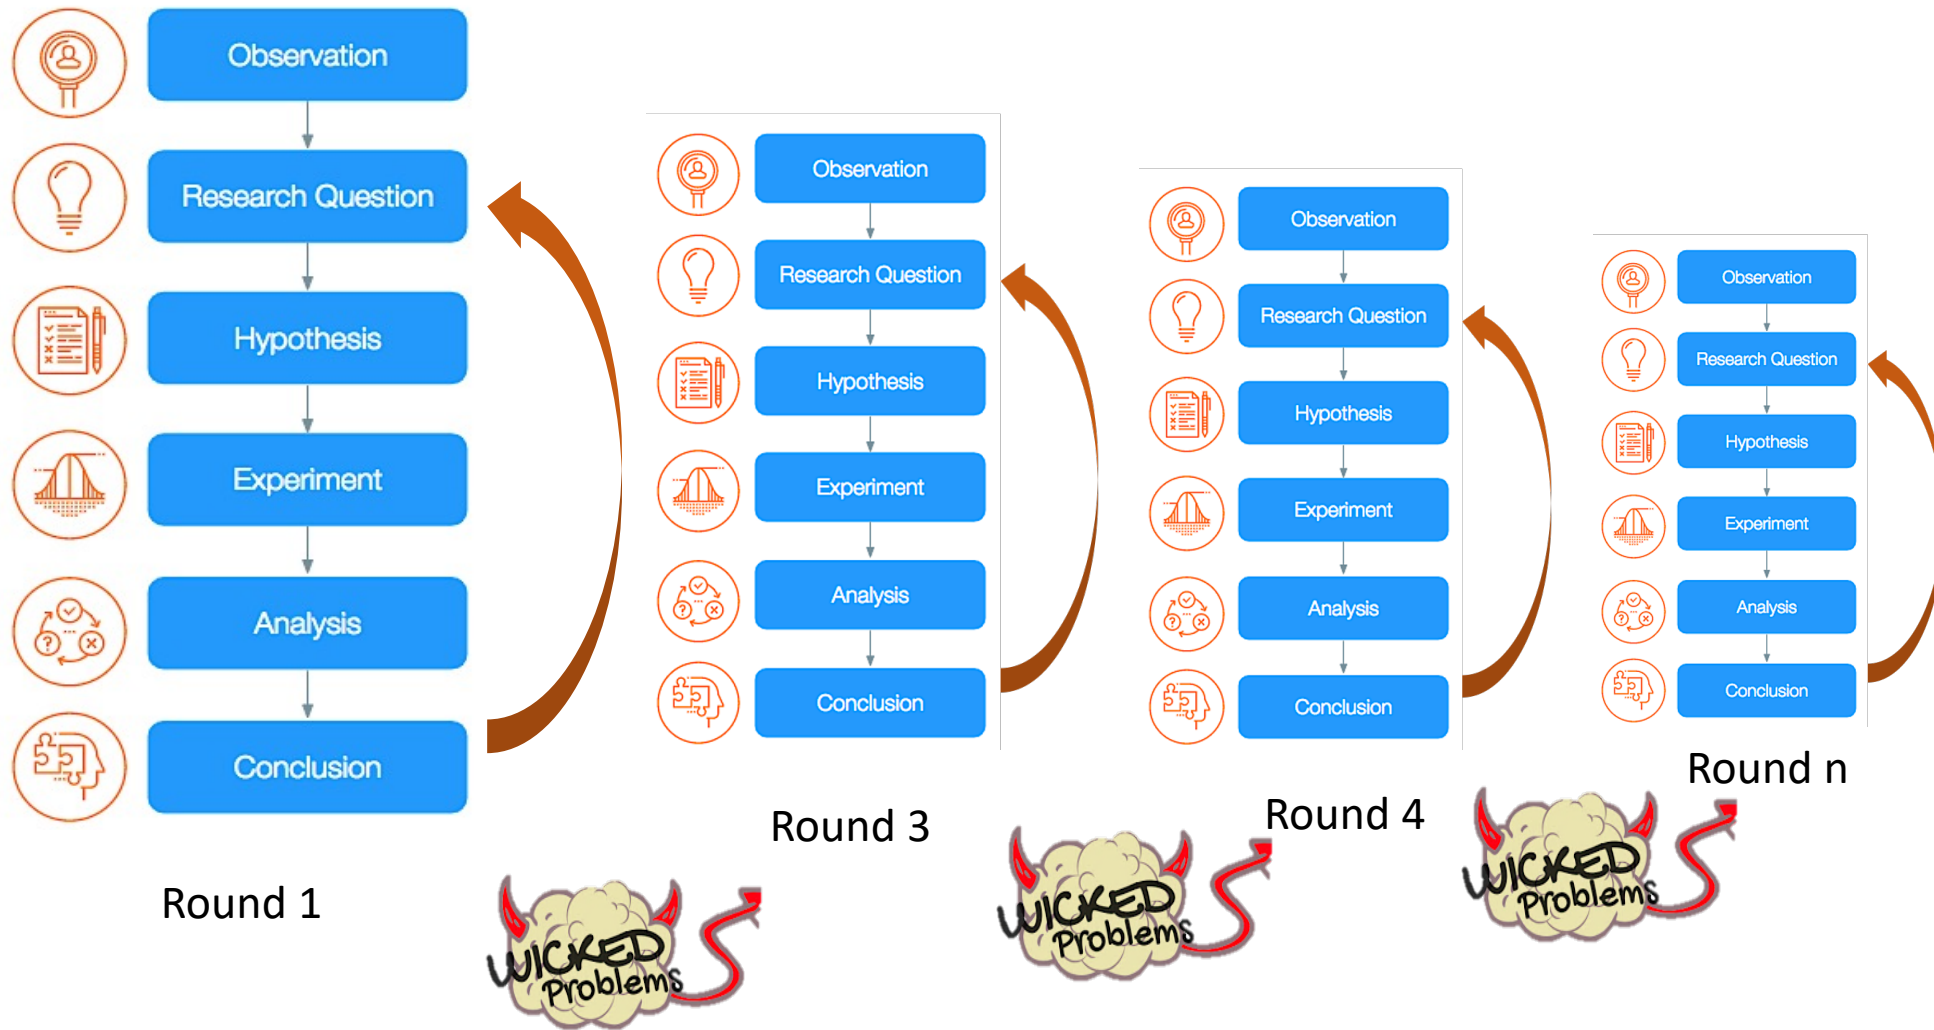

C. Bake a cake

Simple, Complicated or Complex?

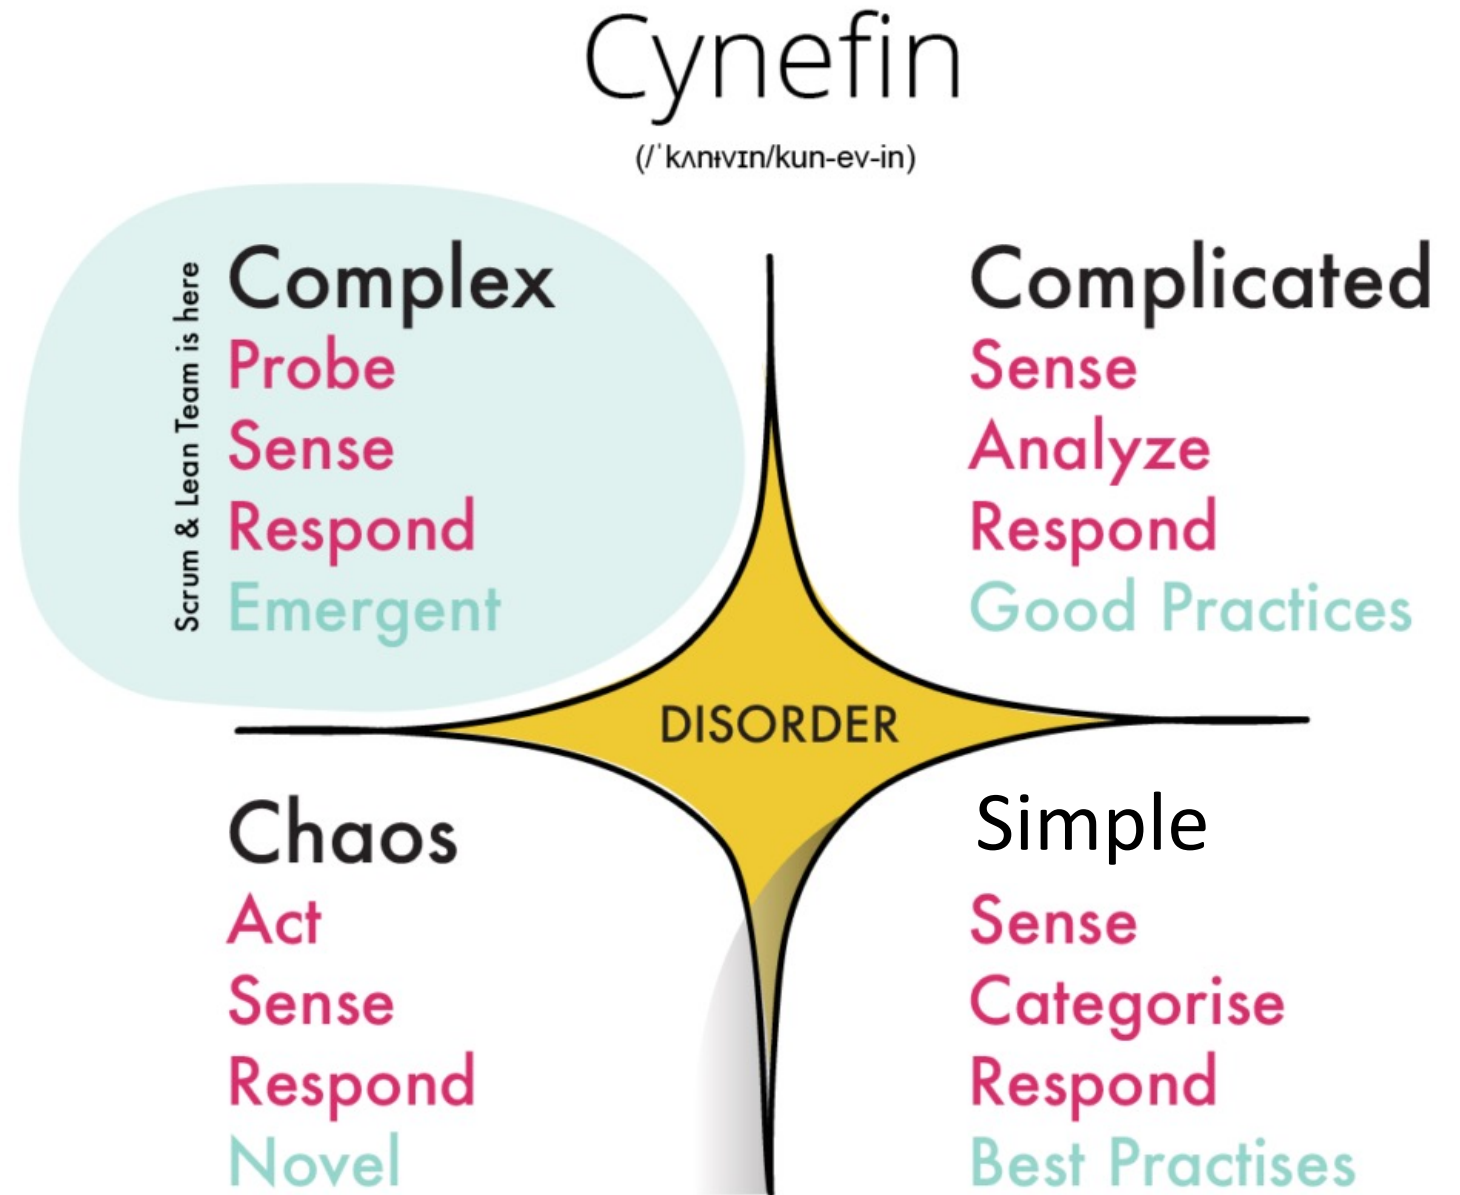

The Scientific Method: 'Post-positivism'

= An Innovative Solution?

Not all
problems
are the
same.

PART TWO DESIGNING INNOVATIONS

Diversify Your Research Paradigms

Don't wear a Fedora when you talk to a cowboy!

		A	B	C	D
What's the nature of reality?	Reality is static and fixed. 	Reality is static and fixed, but is never fully apprehended	Reality is subjective There are multiple, diverse interpretations of reality No one ultimate truth Relativism	Reality may be objective but is continually contested or shaped by structures of social, political, cultural, economic and gender factors	Reality is socially and experientially based, constantly renegotiated, debated and interpreted based on the new unpredictable situations to produce the best desired outcomes.
What's the nature of knowledge?	Objective, generalizable theory can be developed to accurately describe the world. Knowledge can be neutral or value-free description of reality	Objective knowledge of the world is not necessarily fully accessible. Findings approximate truth Knowledge is based on hypothesis that has not been falsified 	Knowledge is subjective There is no one ultimate or 'correct' way of knowing	Knowledge is co-constructed between individuals/groups Knowledge is based on values, mediated by power relations and therefore continuously under revision	Knowledge is constructed from objective and subjective points of view Findings are the means, change is the underlying aim
What's the nature of approach to research?	Verification Hypothesis generation and tested (deduction) Uses scientific method to develop abstract laws to describe and predict patterns	Falsification Testing if hypothesis can be disproved Emphasis on well-defined concepts and variables, controlled conditions, precise instrumentation and empirical testing	Interpretation Understanding uses inductive reasoning Gathers diverse interpretations from researcher/participant interaction in the natural environment to construct meaning 	Transformation Envisioning how things could change for the better Seeks representation of diverse and under-represented views Characterized by continual redefinition of problems and cooperative interaction	Design Seek deep understanding of problem, context and participants to address problem, Cooperative, iterative process of researcher, participants, designers and stakeholders

Educational Design Research: Pragmatist's Approach

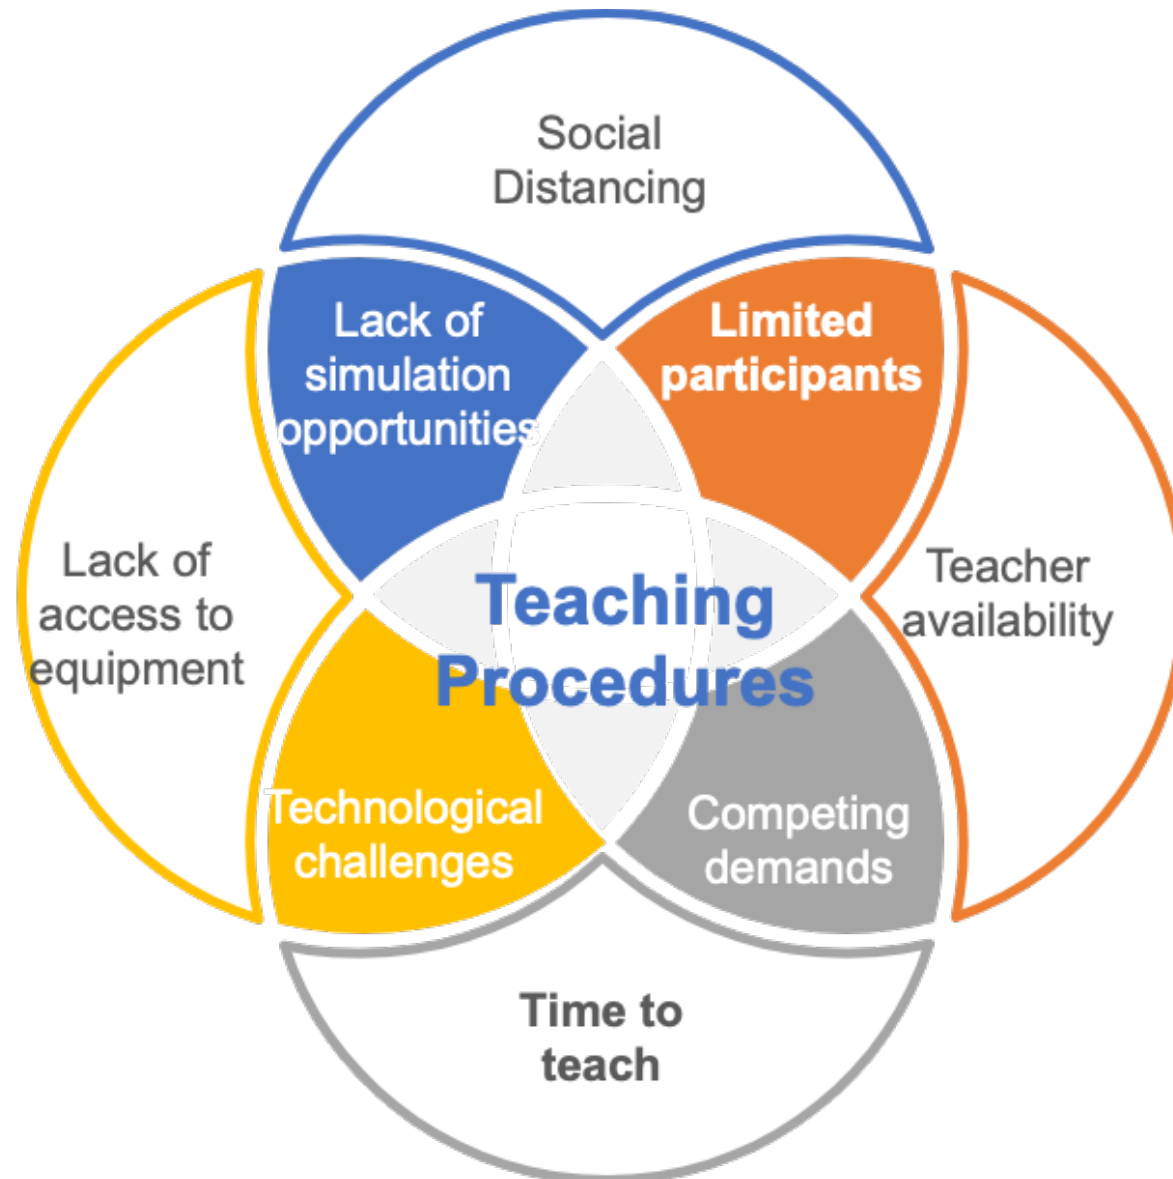

Question-focused
(Traditional research)

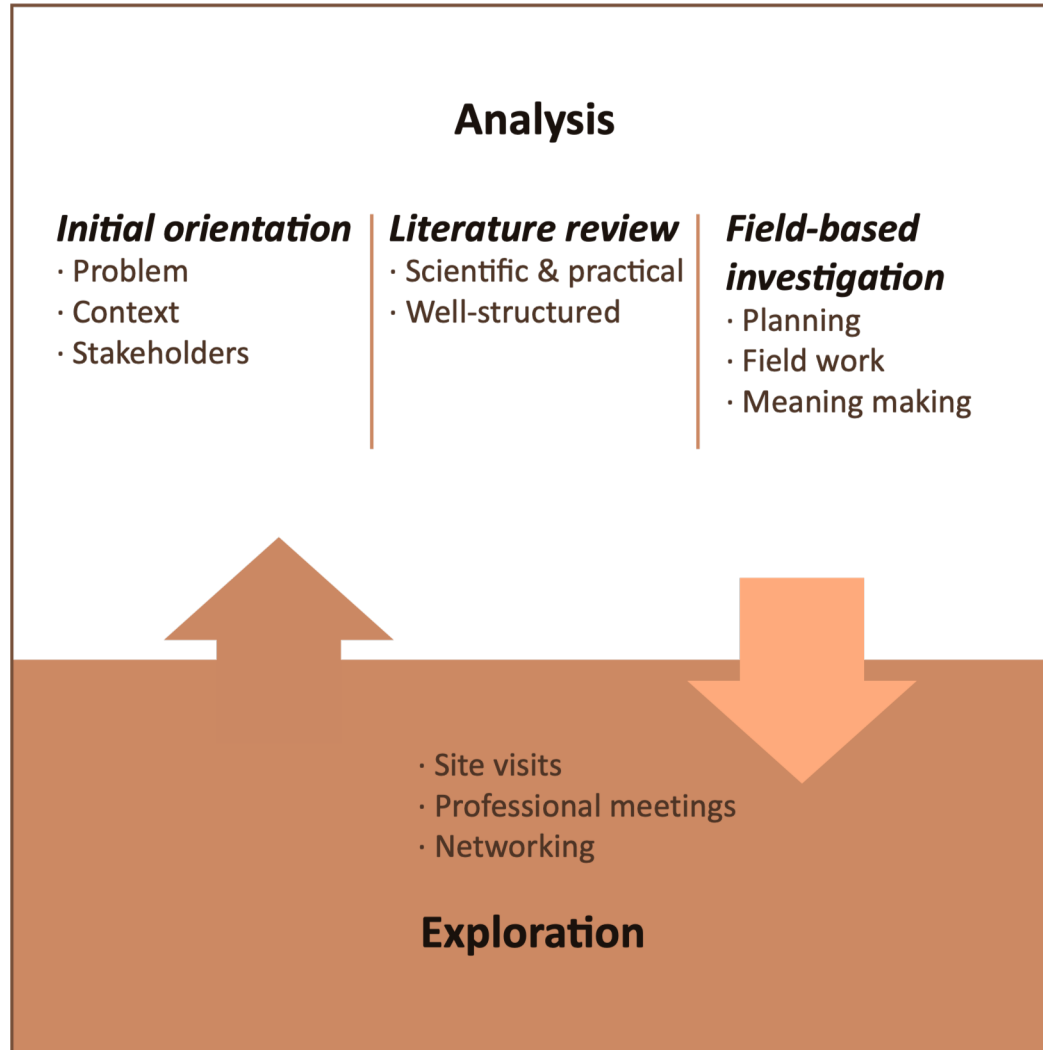

Problem-focused
(Design research)

A Case Study: Educational Problems in Pandemic

Jennifer Benjamin
Saul Flores
Parag Jain
Satid Thamamsitboon

Analysis & Exploration

Outcomes

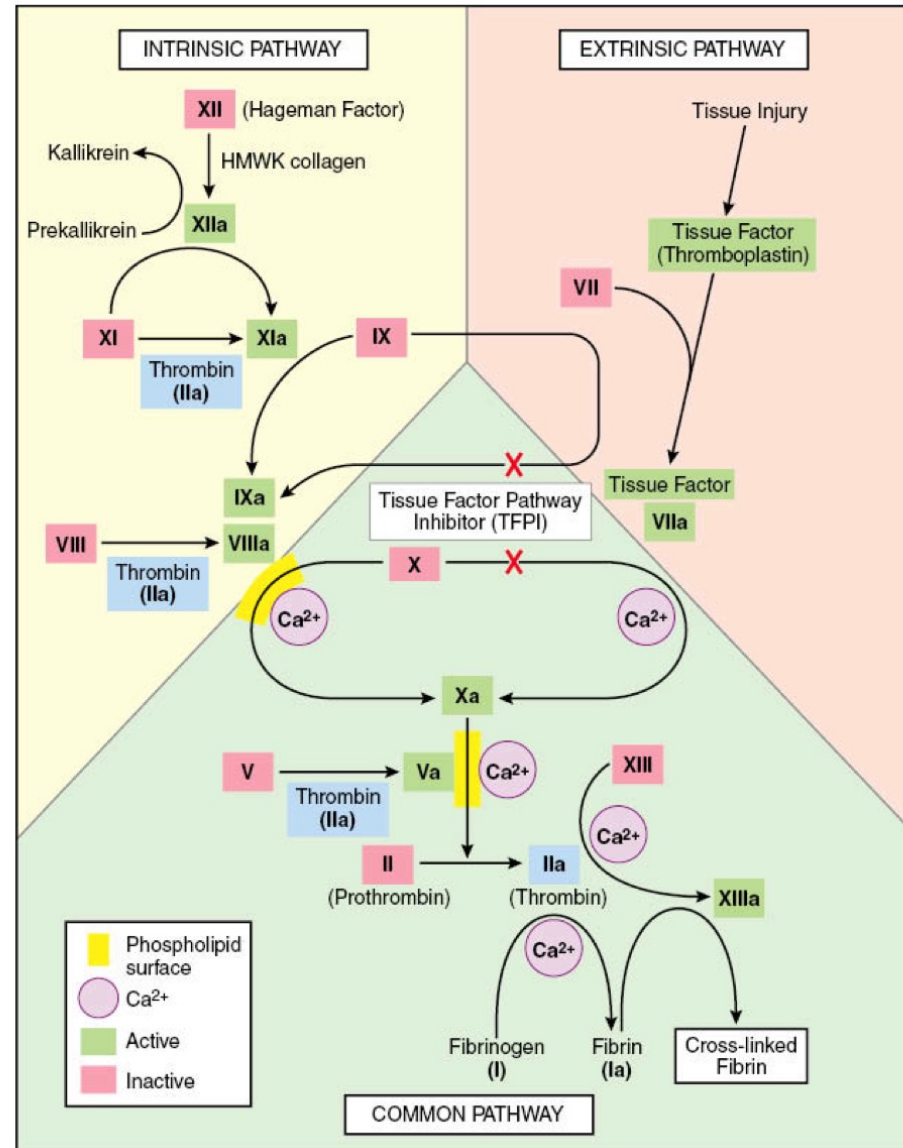

- Enhanced problem understanding
- Strong collaborative relationships
- Conceptual Framework(s)
- Preliminary Design Principles

Conceptual Frameworks, Defined

Are WAYS of:

- Thinking about problem or question
- Representing how complex things (may) work

Conceptual Frameworks can be:

- *Theories* with well-organized principles that have been confirmed by observations or experiments (e.g. Self-determination theory, cognitive load theory)
- *Models* derived from theories, observations or sets of concepts (e.g. Kolb's experiential learning cycle)
- *Evidence-based best practices* derived from outcome and effectiveness studies (e.g. Family Centered Care)

Our case

Deliberate Practice

Peyton & Walker 4-Step Coaching

Demonstration

Step 1 The instructor demonstrates the skill at her normal pace without any comments

Deconstruction

Step 2 The instructor repeats the procedure, this time describing all necessary sub-steps

Formulation

Step 3 The learner explains each sub-step while the instructor follows the learner's instructions

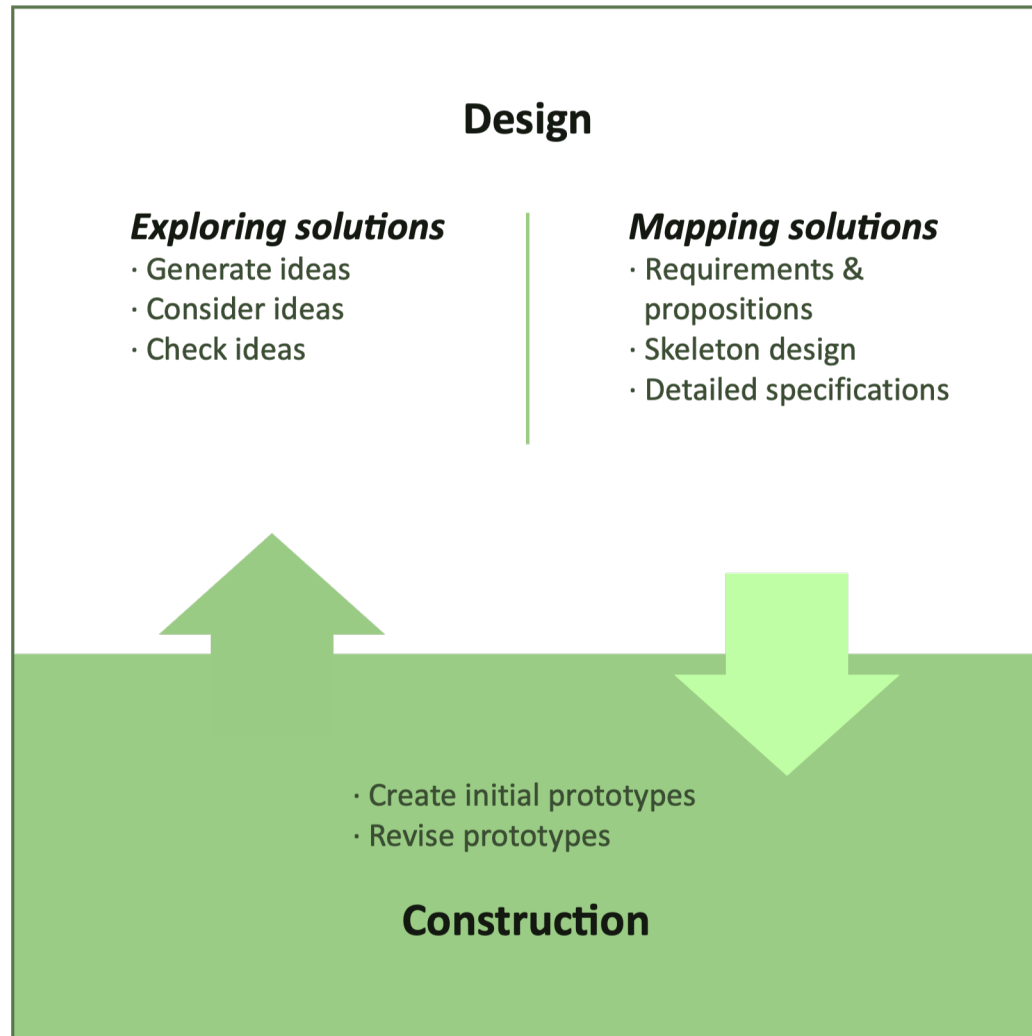

Performance

Step 4 The learner performs the entire skill on their own.

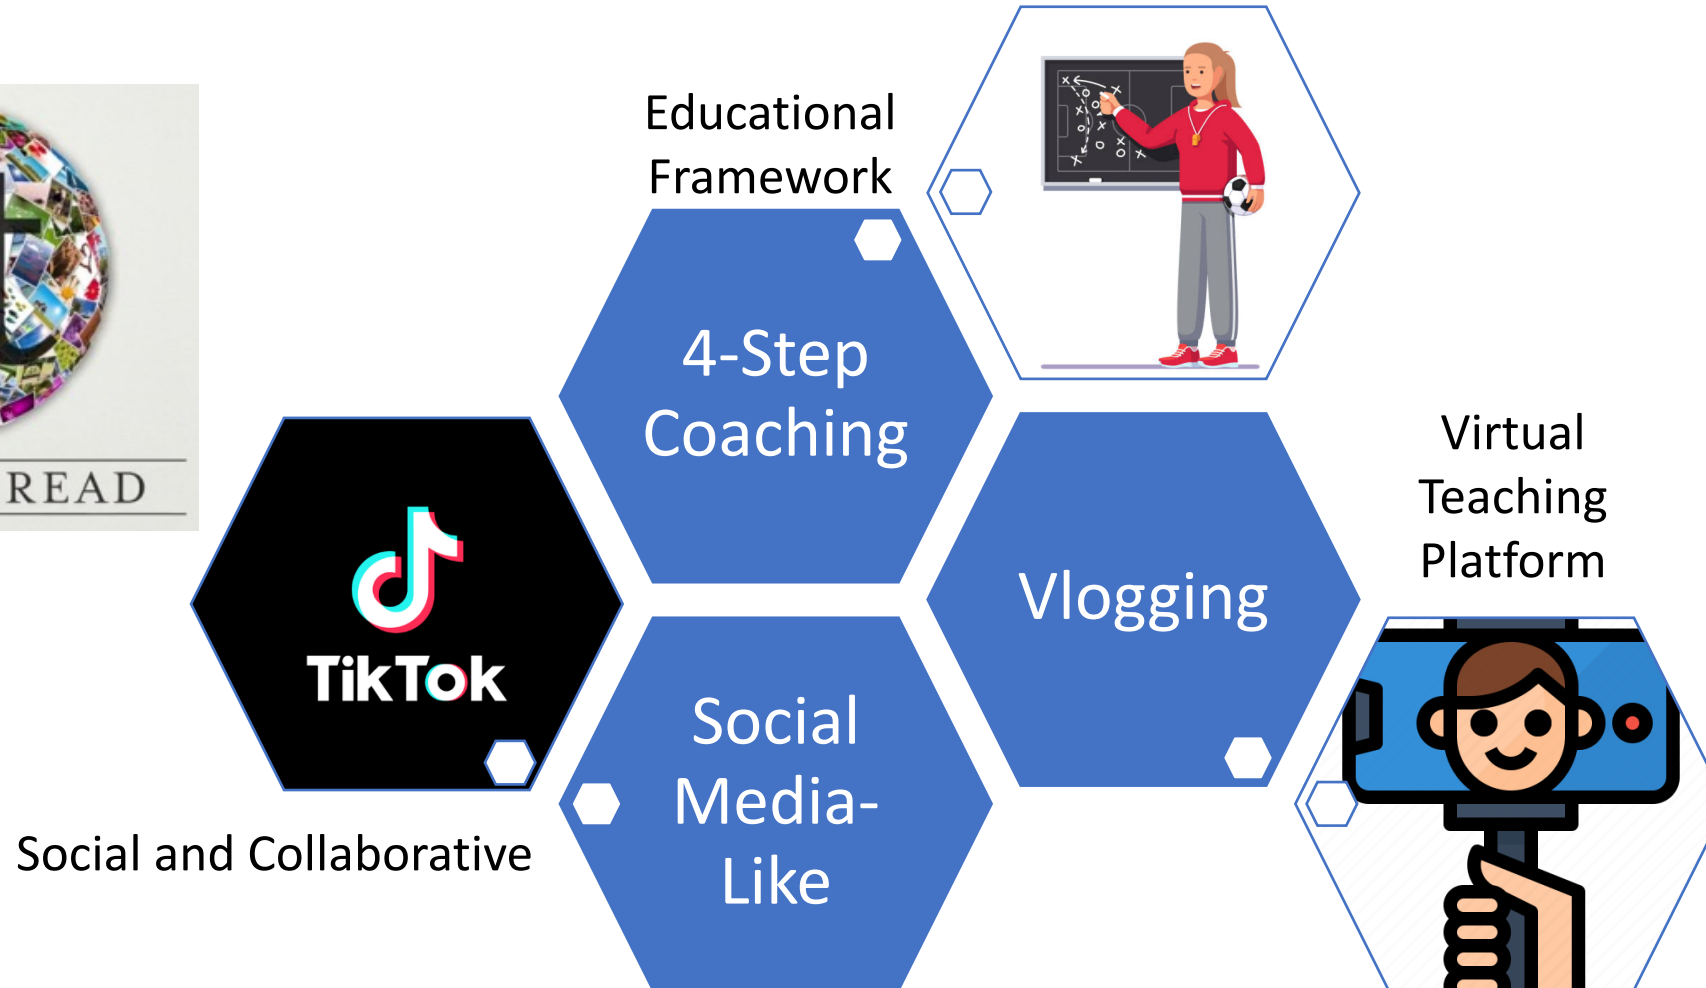

Design & Construction

Outcomes

- Refined design principles
- Various types of prototype interventions

The Virtual Deliberate Practice Module

Vlogging = Video Blogging

The Educational Prototype on Voicethread

Step 1 Demonstration

Expert performs the procedure at regular speed without narration

Step 2 Deconstruction

Expert performs procedure in **slow motion**, step by step, with narration

Pauses and close-up view for pertinent steps

Step 3 Formulation

Learner records voiceover for expert video capturing details from step 2 with immediate feedback on VT

Step 4 Performance

After repetitive practice, the learner performs and records the procedure in simulation lab using a video creator kit.

Uploads video to Voice Thread on personal mobile device for feedback

Critical Components added after Prototype Testing

Introduction to Tracheostomy Education

How to Navigate the Module

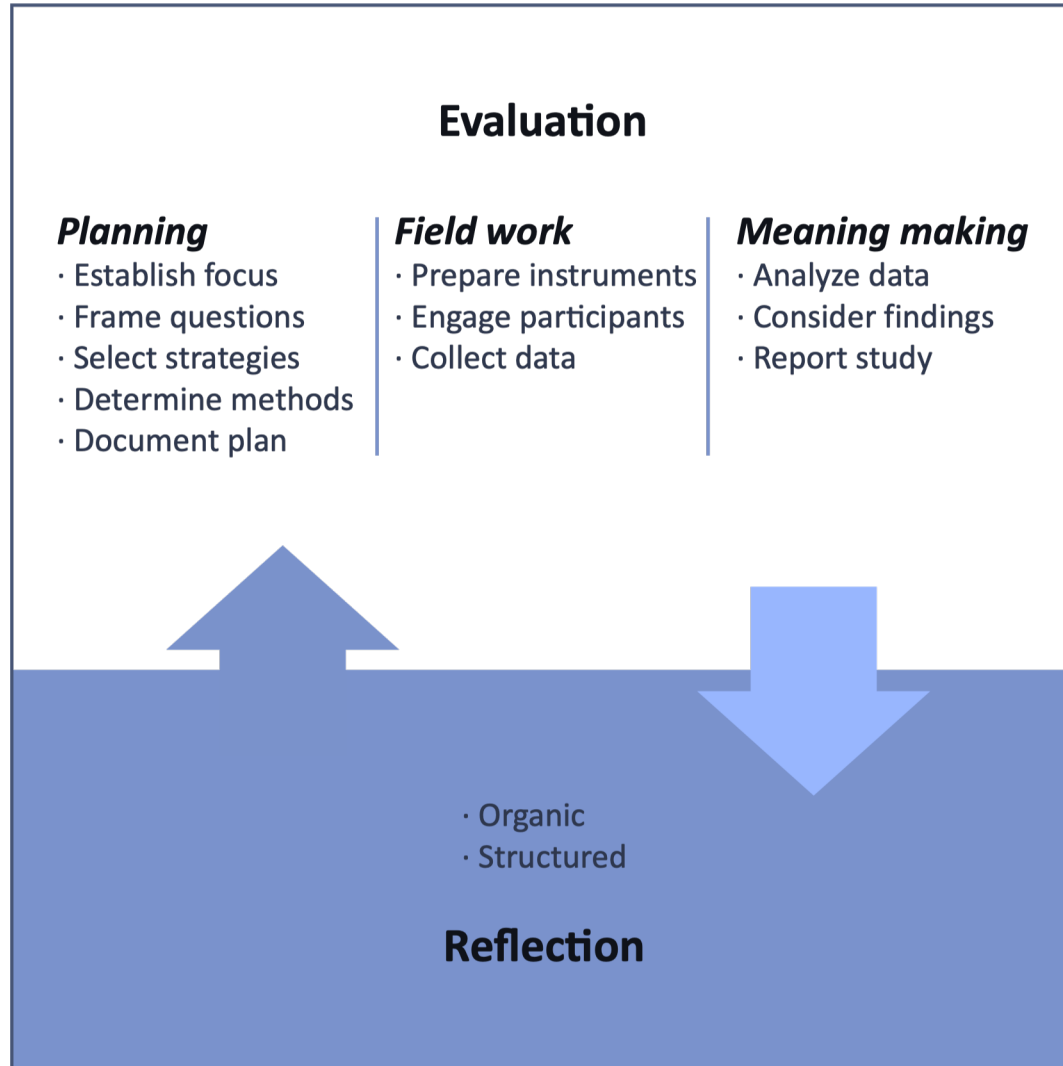

How to use the Video Creator Kit

PART THREE EVALUATING THE INNOVATION

Evaluation & Reflection

Outcomes

- More effective intervention
- Refined design principles
- Presentations and publications

Our Case

Evaluation of Our Product

- System Usability Scale
 - 10 items, 10-point Likert Scale for ease of use and system functions
- Learner Survey: Self-efficacy
- Usage and viewing tracking
- Video Performance Rating
 - 12 items Task Checklist
- Comments/Feedback

A magnifying glass with a black handle and silver rim is positioned over a white puzzle. The lens is centered on a single red puzzle piece, which stands out from the surrounding white pieces. The puzzle pieces are interlocking and have a slightly raised, three-dimensional appearance. The background is a plain white surface.

Research vs. Program Evaluation

Research vs. Evaluation

This **research** is really going to help move our field forward.

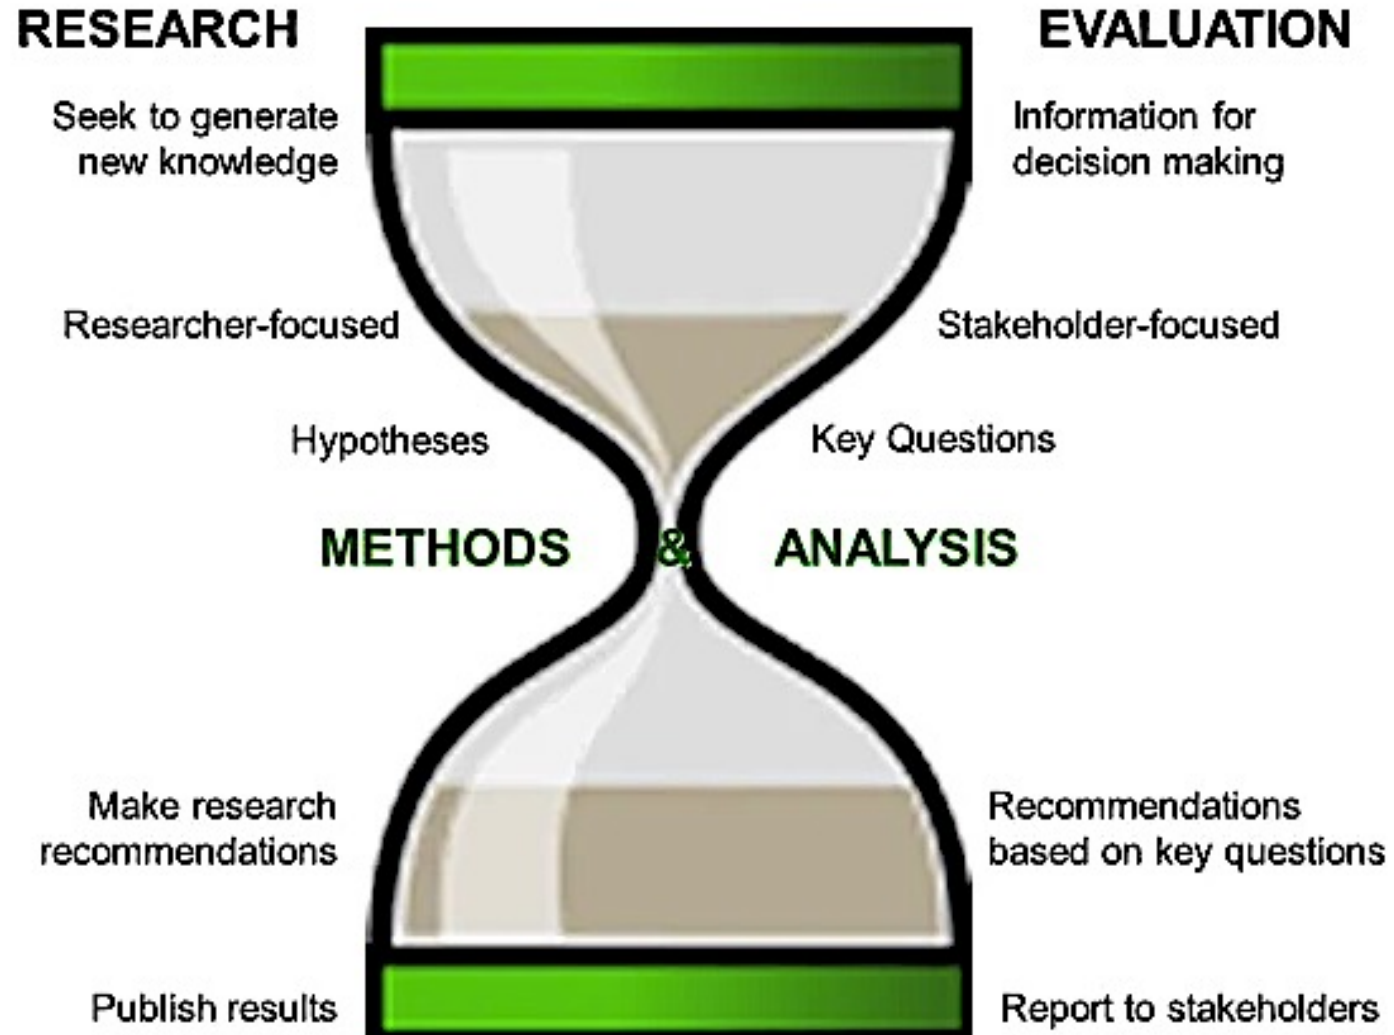

This **evaluation** is really going to help our program become more effective.

“Research seeks to prove, evaluation seeks to improve.

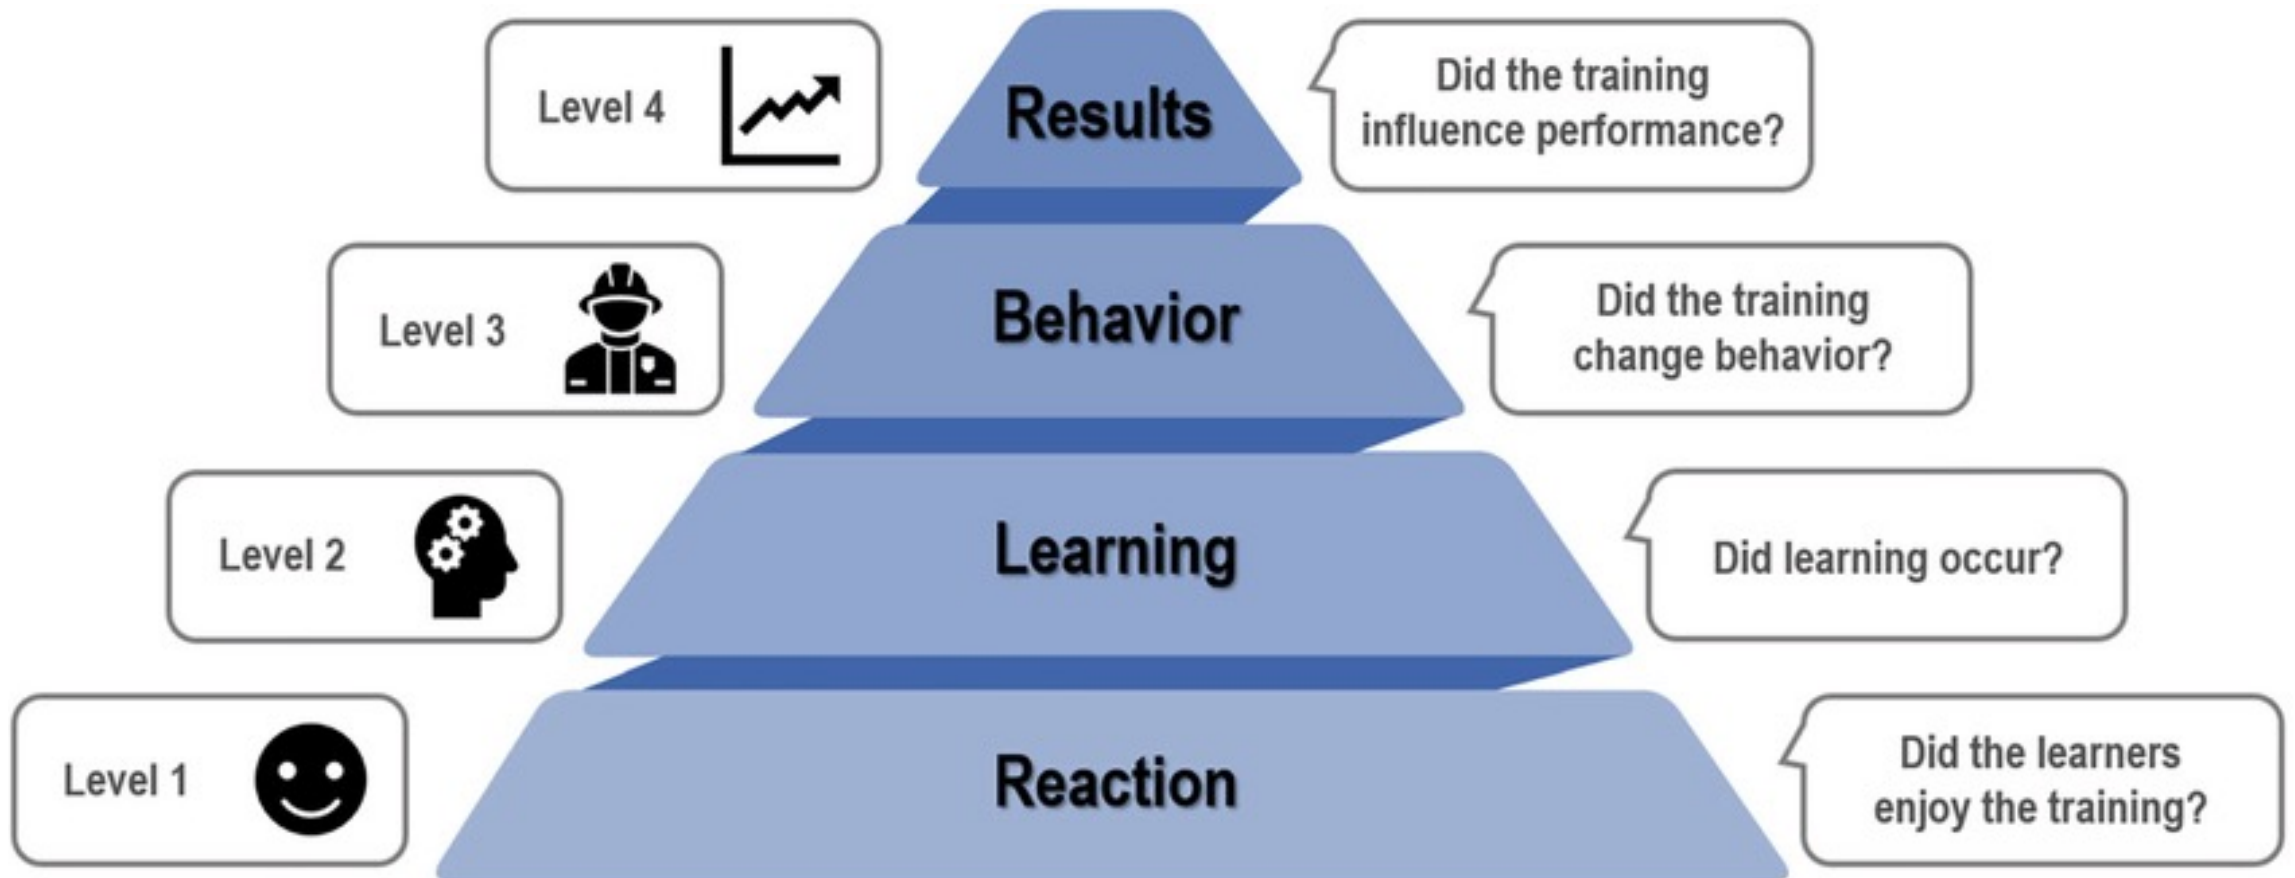

-Michael Quinn Patton

Research vs Evaluation

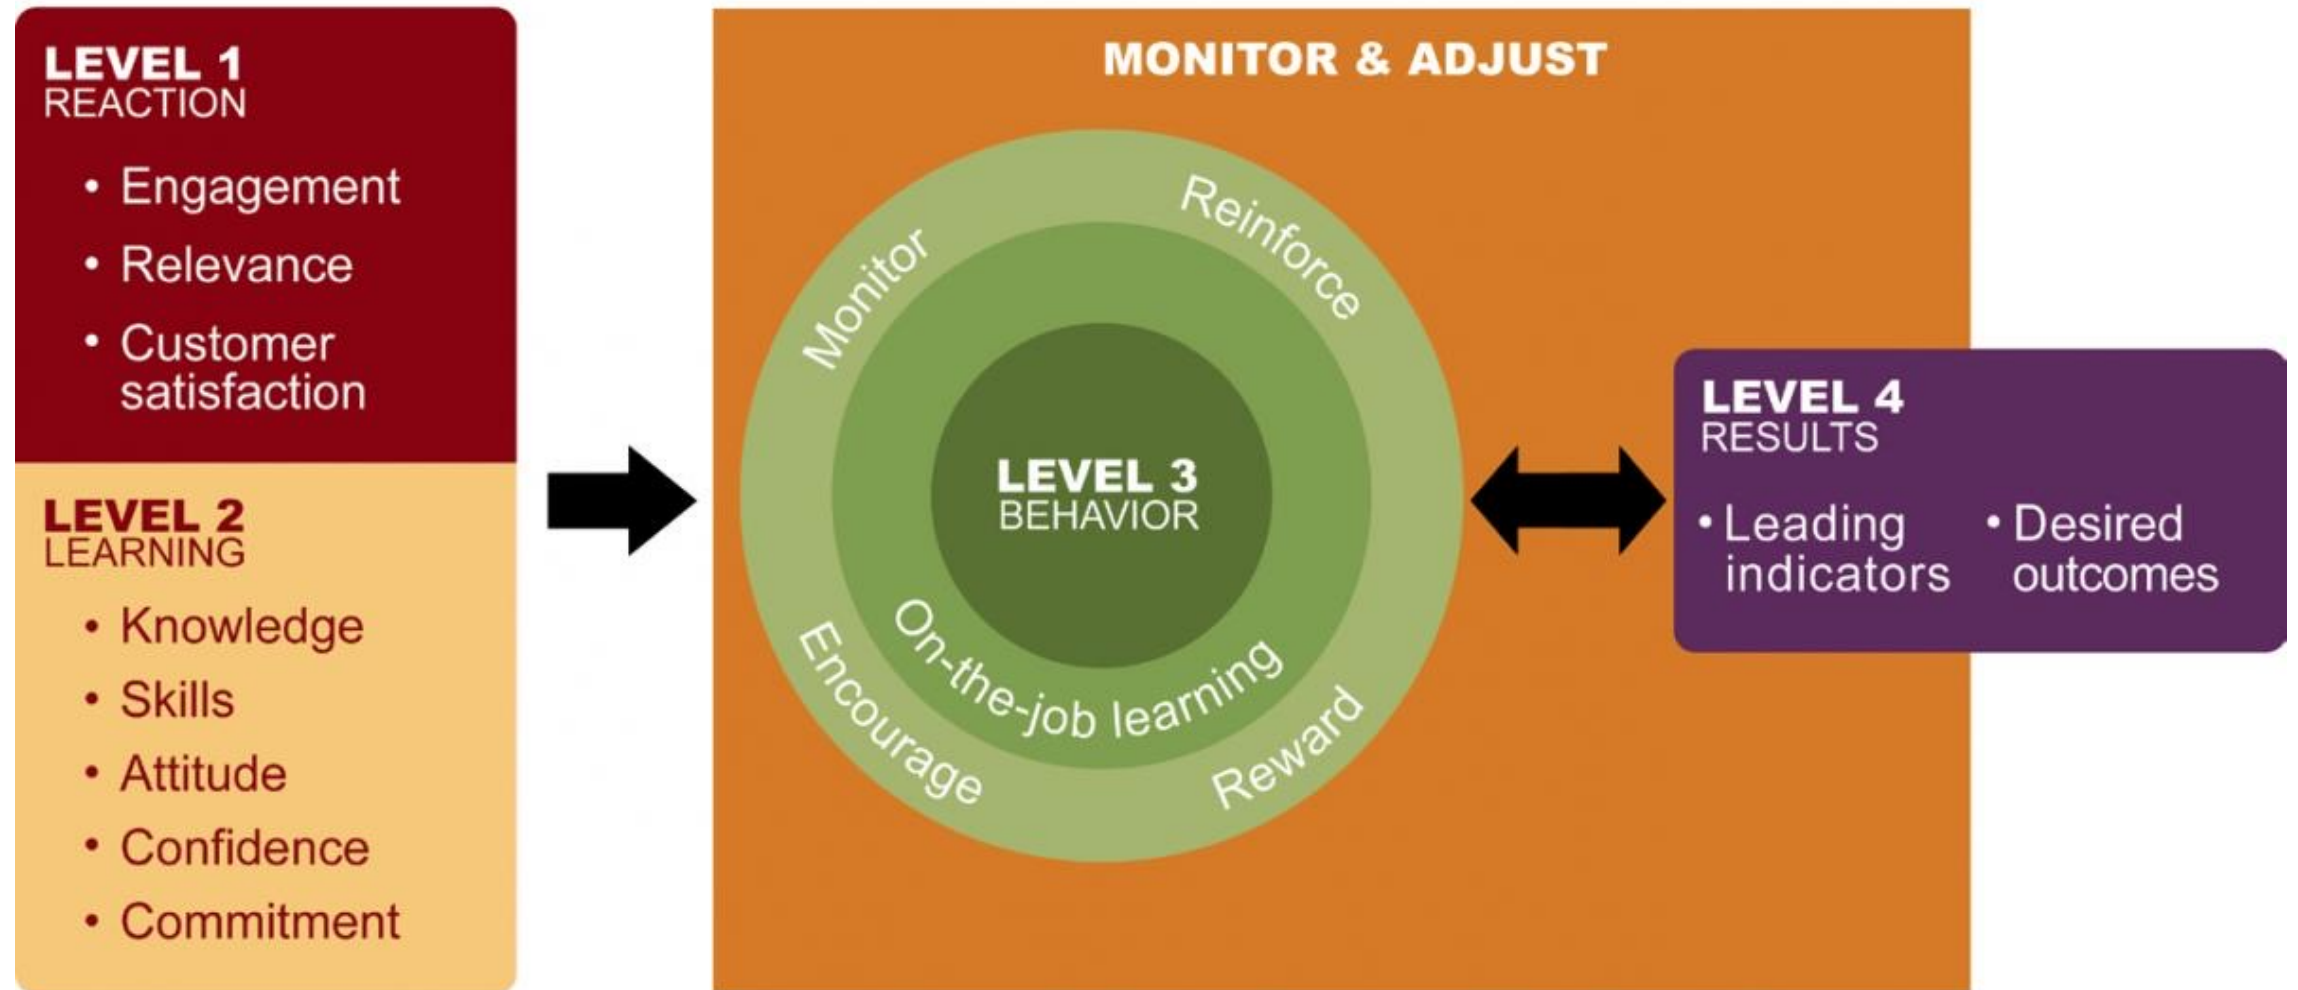

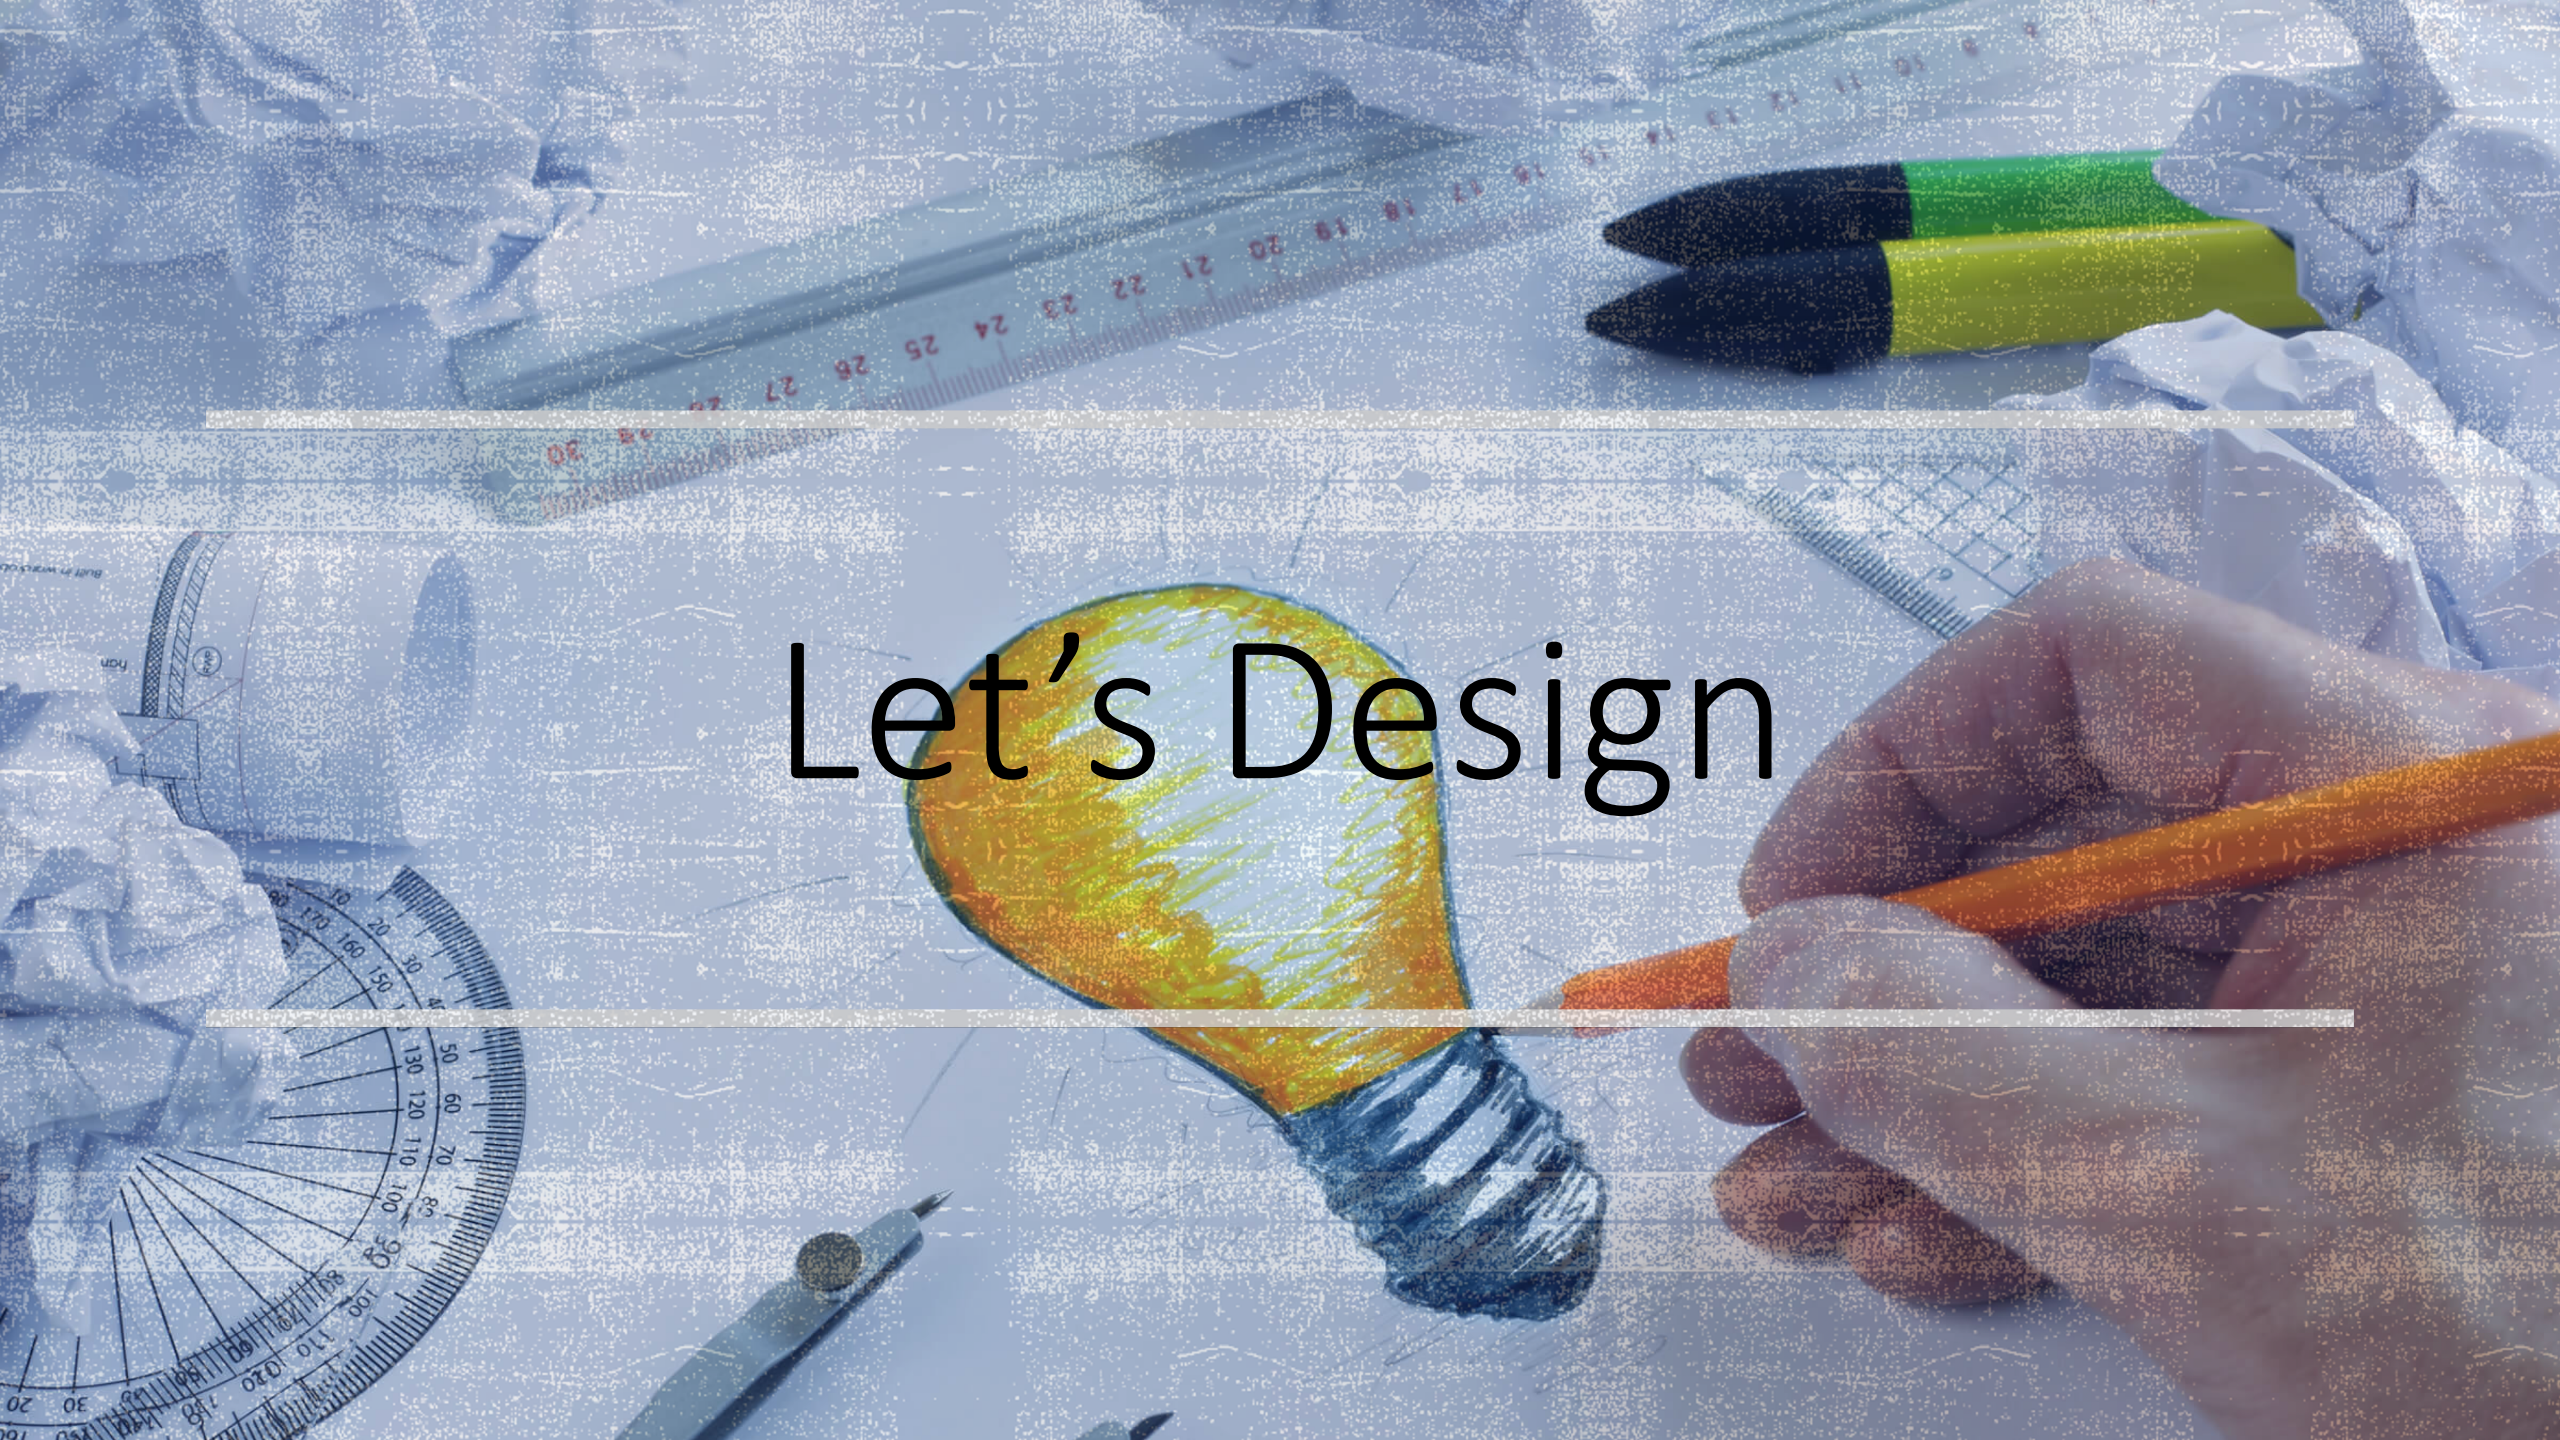

Source: John LaVelle

Kirkpatrick Evaluation Model

New World Kirkpatrick Model

A collage of design tools and materials. At the top, a ruler with red markings and two pens (one green, one yellow) are visible. In the center, a hand holds an orange pencil. Below the hand, a lightbulb is sketched with yellow and orange shading. To the left, a protractor and crumpled paper are shown. The text "Let's Design" is overlaid in the center.

Let's Design

Resident Duty Hour Model & Patient Safety

Postpositivist

“Does it work??”

- Multicenter, RCT
 - Max 24-hr vs. Max 16-hr
 - N=100 programs/ group
- Outcome measurements at 12 mo
 - Serious medical errors
- Reject Null hypothesis ($p < 0.05$)
- Implement the approach (?)

Pragmatist

How can we make it work better?

Research Question(s)

Study Design

Variables/
Considerations

Independent,
Dependent
Confounders

Outcome Measures

Resident Duty Hour Model & Patient Safety

Pragmatist

How can we make it work better?

- Design Research-Mixed Methods
- Iterative design of a duty-hour model, implemented in authentic practices
- Monthly evaluations
 - Residents/Faculty/other providers/stakeholders (viewpoints)
 - Serious medical errors (Trends)
 - Resident well-being
 - System and organizational culture
- Rapid revisions of the model to make it work best for the program

**Analysis/
Exploration**

**Understand
the
Problem**

**Design/
Construction**

**Prototype
Solutions**

**Evaluation/
Reflection**

**Evaluate
the
Results**

Analysis/ Exploration

- Multimodal approach to gain understanding of the problem and context with stakeholders
- Scanning existing knowledge, programs and resources

Design/ Construction

- Theory-informed design of possible solutions to the problem
- Craft and modify prototypes iteratively

Evaluation/ Reflection

- Comprehensive and pragmatic evaluation of the product and design principles
- Reflection on theory used to guide the design

Many problems in medical education are complex and cannot be solved completely (wicked problems).

Educational Design Research is a socially responsible, solution-oriented and pragmatic approach to addressing complex problems in a real-world setting.

In EDR, evaluation seeks to improve the “solution” and enhance theoretical understanding.

Session Evaluation
